

Name	Surname	Abstract Title	Num
Ahmadi Badi	S	Bacteroides fragilis- and Bacteroides thetaiotaomicron-derived outer membrane vesicles control toll-like receptors expressions in opposite directions as new immune response mediators	1
Barretto	S	Interactions between the gut microbiota and the xenobiotic sensors CAR and PXR	2
Escribano-Vazquez	U	Interactions between commensal Escherichia Coli and the host: impact on the intestinal barrier and metabolomic profile of the host	3
Gangupantula	S	Microbiome, immunity and host metabolism cross-talk	4
Gophna	U.R.I	Gut microbiomes and resistomes in patients with chronic antibiotic-treated pouchitis	5
Malaisé	Y	Gut dysbiosis and impairment of immune system homeostasis in perinatally-exposed mice to Bisphenol A precede obese phenotype development	6
Moshiri	A	Evaluation the effect of bacteroides-derived extracellular vesicles on epithelial-mesenchymaltransition factors in IMR32 neuroblastoma cell line	7
Pathan	N	Intestinal dysbiosis and metabolic dysregulation is associated with inflammation and organ dysfunction in critically ill children	8
Vaziri	F	Evaluation and comparison of two important Bacteroides spp. derived outer membrane vesicles	9
Siadat	S.D	The first report of Akkermansia muciniphila and Faecalibacterium prausnitzii abundance in obese Iranian population	10
Gonzalez	Y	Phagocytosis and intracellular growth control of M. tuberculosis by monocytes from DM2 patient was restored reducing in vitro high glucose	11
Khadir	A	The expression levels of soluble epoxide hydrolase are increased in human obese and attenuated by physical exercise	12
Odukanmi	O.A	Suppression of inflammation and oxidative stress promotes healing of experimental colitis in trivalent chromium exposed mice	13
Rekik	R	Aryl hydrocarbon receptor (AhR) transcription is decreased in skin of vitiligo patients	14
Surace	L	CD56BRIGHT And CD56DIM NK cell metabolic reprogramming depends on environmental cues	15
Zhang	J	Regulation of Influenza A virus intracellular life cycle by cellular E3-ubiquitin ligase MGRN1 via the post-translational modification of viral and cellular proteins	16
Bernard-Raichon	L	Identification of commensal bacteria that harness the host immune response in Tuberculosis	17
Cheng	C	NAD+- dependent histone deacetylase Sirtuin 1 - a HDT target against TB	18

Dumas	A	Pathogen-microbiota interactions in tuberculosis	19
Gangupantula	S	Pathogenic effects of microsporidian on tasar silkworm, <i>Antheraea mylitta</i> Drury: role of microbiomes	20
Hoffmann	E	ArfGAP1 restricts entry of <i>Mycobacterium tuberculosis</i> into epithelial cells by rearrangements of the actin cytoskeleton	21
Livrelli	V	Enterohemorrhagic <i>Escherichia Coli</i> interactions with peyer's patches: role of long polar fimbriae and inhibition by probiotic yeasts and by sugars	22
Marteyn	B	Oxygen depletion is essential for bacterial infection	23
Odukanmi	O.A	Kolaviron (a <i>Garcinia kola</i> extract) modulates gastrointestinal motility and secretion in experimentally altered gut homeostasis	24
Riba	A	Neonatal <i>Giardia lamblia</i> infection induces chronic carriage and metabolic changes	25
